### **Election/Restrictions**

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-15 and 28-33 are directed to a first step of preparing a primary storage medium in which a first storage area corresponding to the interval before the arrival time of the trigger signal and a second storage area corresponding to the interval after the arrival time of the trigger signal have been defined, a second step of continuing to write a series of incoming data into the first storage area using wrap-around addressing until the trigger signal arrives; and a third step of writing a series of data arriving after the arrival of the trigger signal into the second storage area instead of ceasing to write data into the first storage area when the trigger signal arrives.

Species 2, claims 16-27, 34, and 35 are directed to a semiconductor integrated circuit comprising: a first port which is inputted with the sampled series of data to a second port which is trigger signals; inputted with predetermined a third port connected to a predetermined storage medium; a fourth port which outputs series of sampled and held data; an area definition data storage means for storing area definition data which defines a first storage area and a second storage area in the storage medium connected to the third port; a first write control means for continuing to write a series of data inputted through the first port into the first storage area of the storage medium connected to the third port, using wrap-around

addressing until a trigger signal is input through the second port; a second write control means for writing a series of data arriving after the arrival of the trigger signal into the second storage area of the storage medium instead of ceasing to write data into the first storage area of the storage medium when the trigger signal is inputted through the second port; and a data read control means for performing control over transmission of data stored in the first storage area and the second storage area of the storage medium connected with the third port to the fourth port.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 5809.02(a).

Should applicant traverse on the ground that the species are not patentability distinct, applicant should submit evidence or identify such evidence now of record showing the species to

be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
